

CLIMATE DETECTIVES 2022-2023

Sisters
Laaer-Berg-Straße 25-29

RESEARCH QUESTION

How big is the garbage problem between Oberlaa and the Hauptbahnhof?

SUMMARY OF PROJECT

Summary of the project

Our group of seven had assigned three members for each of the investigated places: Wig, Motorikpark and Laaerberg Street .Additionally one group interviewed people in the WIG. We used 30 L bags to collect the trash . Together we created an spredssheet with a diagram for each location.

Summary of the project

Our group of seven had assigned three members for each of the investigated places: Wig, Motorikpark and Laaerberg Street .Additionally one group interviewed people in the WIG. We used 30 L bags to collect the trash . Together we created an spredssheet with a diagram for each location.

Figure 1: Trash in the Motorikpark

MAIN RESULTS

The diagram is a good overview of the project.. You can see which places are the dirtiest. On average, Laaerbergstrasse has the most rubbish (40%). Most things have changed at WIG; there is the least garbage (24%). As a solution to this problem we would stick photos of the diagrams we made on the dustbins.

ACTIONS TO HELP LESSEN THE PROBLEM

The key to improving the situation is to raise awareness of the littering problem. As a solution to this problem we would put up the photos of the diagrams we had made on the trash cans to make the public aware of their participation in keeping the areas clean.
