RESEARCH QUESTION

Where does our waste go?

SUMMARY OF PROJECT

First, we had to identify a climate problem.

Then, after collecting all the necessary information, we began to work on what we wanted to do: some animations, with various characters and scenarios, where we explained and visually showed everything we had learned during this time.

We decided to make animations because although it took a while, we thought it was a very original way of presenting our work.

Each group made its own animation, each group in its own way but all with dedication, since doing it was easy to us, but we learned a lot.

What we wanted to achieve with what we did was that other people could see it, get them to be informed and thus raise awareness at the same time as we learnt and also raise awareness on the topic.

We also created, hung and disseminated, with the same purpose, some posters on this subject that we put up all around our town.

In addition to the fact that we really liked doing this project, we are very excited to participate in a contest like this, and we are not worried about winning or losing. We just want more people to be able to see our work and be able to show it to a greater extension of people.

CLIMATE DETECTIVES

Figure 1: Poster

MAIN RESULTS

Waste 6th A

Index

Phytosanitary waste, glass waste, electronic waste, tire waste, drug waste, paper and cardboard waste and oil waste.

Phytosanitary waste:

What is the average number of phytosanitary waste produced per day? The average is 3 grams of phytosanitary waste per person per day, where does it end up? You must take it to a clean point.

Electric waste

Where are electronic devices going? They go to a waste plant, there, the electronic devices are disassembled and each material is recycled separately and what can be reused it is reused. And how much do we generate per person? Here in Spain we generate an average of 9gm per person per day.

Drug waste

Where does drug waste go? It goes to a sigre collecting point, that's why they must also be thrown in special places like the sigre

ACTIONS TO HELP LESSEN TO THE PROBLEM

ACTIONS:

After our research and the completion of various works (animations, video games...), we decided how important it was to transmit everything learned to our colleagues and the rest of the public.

For this reason, we decided to carry out a media campaign, in order to inform and raise awareness of the importance of separating and taking each waste to the appropriate place, for its subsequent treatment and use.

We got in touch with the City Council of our town, Picassent, offering the possibility of publishing these posters in the common municipal spaces: Municipal Market, House of Culture, School of Music, City Hall and other associations, and they accepted our proposal. Specifically, we have prepared some posters with the following slogans:

HELP THE PLANET BY THROWING PLASTIC INTO THE YELLOW BIN

THROW YOUR TIRES WHERE YOU OUGHT

USED OIL HAS A CONTAINER
